Soils Management Solutions

At Provectus we recognise that every soil treatment enquiry has its own unique set of requirements and challenges.

Our dedicated team of industry professionals will guarantee a cost effective and environmentally sound soils management solution that will include:

- Waste characterisation and on site soil sampling service
- Treatment and disposal of contaminated soils at EA approved facilities
- An inclusive logistics and haulage support package
- Supply of onsite soils management and supervision personnel
- Management of invasive species in soils
- Fully auditable waste consignment notes and material tracking
- Implementation of a waste minimisation and material reuse strategy
- National coverage

Wide Range of Waste Types

Our treatment centre is designed to treat a wide range of hazardous and non-hazardous wastes to enable compliant reuse therefore eliminating your Landfill Tax liability.

Hydrocarbon and asbestos impacted materials such as:

- Soils
- Track ballast
- Road sweepings
- Gully wastes
- Pile arisings
- Dredgings
- Interceptor wastes
- Tunnel arisings

Full Traceability

All duty of care transactions are logged and you will receive a complete data pack on the volumes of different waste types and their final disposal locations.

All permits for disposal sites will be provided with waste carriers licences prior to waste movements commencing.

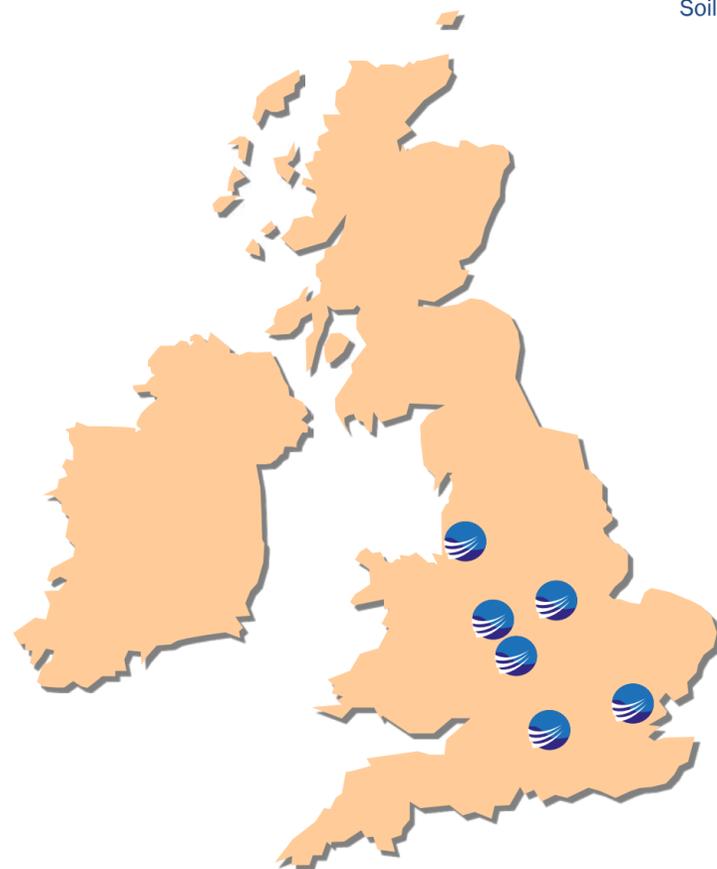

This will save you time and money in ensuring you have complete visibility on waste movements and is of benefit to clients who are subject to third party accreditation audits.

Registered Address:

9 Kingsdale Business Centre, Regina Road, Chelmsford CM1 1PE

Provectus has been providing turnkey brownfield remediation solutions for over 25 years to the regeneration industry, adding value to brownfield assets at a fixed price. This has included the first use of in-situ thermal desorption in Europe, fixed price remediation and enabling works as well as insurance backed risk transfer packages and innovative funding solutions.

Uniquely we have delivered a number of multi million pound total risk transfer packages, combining insurance with fixed price remediation solutions at transaction stage to enable our clients to achieve best value from environmentally challenging property assets.

This has included the recovery of value from site assets, including open cast coal extraction to help clients fund remediation works in a cash positive way. Building on this experience, we are currently evaluating other open cast coal extraction opportunities in the UK.

Provectus has a proven track record and extensive experience in adopting both conventional and more innovative remediation technologies for soil and groundwater, treating a wide variety of contaminants under tight project timescales.

We are the only contractor in the UK to enhance SVE with conductive heating, avoiding costly over-runs and gaining rapid regulator sign off where others cannot, and are the first Company in the UK to apply ex-situ thermal treatment using steam treatment piles.

Managing risk is our business

Total Risk Transfer

Provectus provides the remediation solution, designing a scheme that can be delivered for regulatory approval at a fixed price. This provides certainty as to remediation but insurance is then wrapped around our offer to ensure the client gets protection for off-site pollution and future pollution events.

Each deal is different: we provide the complete package and have appointed representatives registered through the FSA who can design the right insurance fit around the right remediation solution.

- Fixed Price Remediation
- Insurance Wrap
- Liabilities are managed to such an extent, that both vendor and purchaser are much more likely to be able to step away from the risk upon the subsequent sale of the site.

Remediation Technologies

Our remediation strategies are designed to create the optimum and most practical redevelopment solution for any site, whilst providing a "suitable for use" development platform.

Our Experience

- In-situ & Ex-situ Bioremediation
- Ex-situ Thermal Treatment
- Monitored Natural Attenuation
- Air / Ozone Sparging
- Soil Vapour Extraction
- In-Situ Thermal Desorption
- Interception and Containment
- Pump and Treat
- Chemical Oxidation
- Soil Stabilisation
- Permeable Reactive Barrier
- LNAPL/DNAPL Recovery

Brownfield Services

Since 1990 we have been successfully integrating brownfield services from risk assessment through to remediation design and implementation. This routinely involves hands-on delivery of all the associated issues commonly encountered on brownfields.

- Principal Contractor under CDM
- Site Preparation to Development Platform
- Asbestos & Hazardous Material Management
- Knotweed Treatment & Removal
- Secondary Aggregate Processing to WRAP
- DQRA
- Site Investigation
- Remedial Design
- Mine Works Grouting
- Validation
- Regulator Sign Off

Fixed Price Funding

Fixed Price

The majority of our remediation projects are delivered at a fixed price.

We have assisted clients to assess liability issues on many sites at acquisition stage and through continual involvement with client architects, planners and engineers during the redevelopment design process we can ensure our solutions dovetail with the redevelopment objectives overall and maintain our reputation for delivery of these solutions at a fixed price.

Routinely we will deliver the works under a defined form of contract for a guaranteed fixed lump sum which is established at transaction stage. Sometimes this is index linked for a short period to recognise the protracted planning process for some sites. All have been executed successfully to the delight of our broad client base. Our clients get exactly what we promise: delivery of a remedial scheme to regulator sign off by one Company including design and validation.

Target Cost & Risk Share

We have delivered a number of contracts adopting target costs established by third party Consultants working on behalf of vendors or clients prior to sale or purchase. Normally we will have established a significant cost risk item that may be reduced through our direct input and delivery - thereby agreeing a cost saving/sharing mechanism with the client whereby savings are shared equally.

Funding

Since 2008 the outlook for funding many remediation projects has been extremely difficult. We have delivered a number of projects now that have realised cash through the delivery process and thereby assisted clients in positive cashflow and delivery of a site without inherent liability - unlocking further finance funding if required.

Diverse Technologies

At Provectus we implement a wide range of physico-chemical and biological techniques.

This means a variety of physical and chemical contamination can be treated at EA approved sites.

This wide range of treatable contaminants provides you with reassurance that we are able to accept soils compliantly without the fear of loads being rejected.

24 Hour Turnaround

We offer a 24 hour quote response guarantee, so you will have your price quickly, enabling swift decision making.

We are also able to attend site at short notice to inspect soil stockpiles or undertake soil sampling and analysis to confirm acceptance.

Cost Effective

We primarily offer a treatment or recovery service for soils rather than a landfill only option. This allows us to recover materials for beneficial reuse rather than treatment for landfill disposal. The result is, we are able to offer cost effective disposal options, as well as scoring well on the waste hierarchy as material is beneficially reused.

We are able to provide discounts for larger volumes and our prices are guaranteed for the long term in line with your project requirements.
